The KORO Field TopMaker (FTM) was redesigned by Imants BV 4-5 years ago, this was followed two years later by the introduction of 2 new rotors – the Terraplane® and Universe® - the introduction of the new rotors came about from research we carried out and learning from sports turf groundsmen that they wished to enhance the quality of their sports turf and playing surfaces.

Terraplane® rotor

Universe® rotor

The Universe® rotor was initially developed for the annual cleaning out of Desso Grassmaster. In one pass the whole annual renovation process to include dressing with 40/50 ton sand, fertilising and overseeding could be carried out in one day instead of 4/5 days which using other renovation methods takes.

Koro FTM with Universe® rotor working on Desso close up of surface

The Universe® rotor consists of four spirals with hooked tungsten tipped blades 10 mm wide

When all blades are fitted they cover 100% of the surface area, they will snatch out poa plants leaving the deeper rooted good grass plants. Accuracy of cut/depth is controlled by the four roller adjusters, which can be set and locked off to increments of 1/10<sup>th</sup> or 1 mm.

Adjuster counter

If blades are removed off every other spiral then you are able to cut 10mm miss 10 mm and so on.

Last year we carried out work on cricket squares with the Universe® rotor (all blades fitted), which were very hard and dry, with excellent results

We also experimented at the Oval Cricket ground, and on a golf green with *3mm and 5mm test blades on two spirals* where we scarified/verticut (we did not collect this time). This left an uncut gap of 19mm between the cut lines, at a depth of 25mm.

10mm, 5mm & 3mm blades

*Koro FTM with Universe®*

Much work with tremendous results has been carried out in the USA these last 18 months with the Universe® rotor on warm season turf.

Information on the Koro FTM can be found on the following websites [www.campeyturfcare.com](http://www.campeyturfcare.com) and [www.korofieldtopmaker.com](http://www.korofieldtopmaker.com) or Jerad Minnick's blog at [www.growinggreengrass.net](http://www.growinggreengrass.net)
