## Cultiroll CR2000

For compaction relief and seedbed preparation on goalmouths, centres and other worn areas.

The Cultiroll CR2000 is designed to relieve surface compaction in heavy-wear areas like football goalmouths & centre circles. Generally used after deep compaction relief and after surface levels have been restored the Cultiroll will mix dressings into the surface without destroying the soil profile. The Cultiroll CR 2000 is ideal preparation before overseeding, but can also be used for rolling purposes only. The unit can be front or rear 3 - point linkage mounted and has hydraulic depth control & levelling function facility.

### Specification

Working width	2.0m
Transport width	2.3m
Length	1.0m
Weight (approx)	320kg (without additional weights)
Number of blades	13
Spacing of blades	160mm
Thickness of blades	6mm
Power requirement	45hp
Tractor requirements	1 double acting spool valve
