

Raycam

In-Fielder

One - pass surface restorer for hard porous & gravel surfaces

The Raycam In-Fielder is designed to re-condition and level out hard, uneven playing surfaces such as clay tennis courts, baseball in-fields, hard porous playing fields and gravel paths. The machine is simple to operate, having just two manual adjustments. The cutting depth of the grader blade and the brush height can both be adjusted individually for a preferred finish. The 6-piece roller eliminates skidding & bunching whilst turning & the spring loaded, breakaway wing-brushes permit fence line grooming and prevent property damage.

Specification

Overall working width	1.80m
Length	1.20m
Packer Roller	152mm diameter
Pulverizer Roller	127mm diameter
Weight	370kg
Power requirements	25hp+
