

TIP

SW48A Sweep 'N' Clean

The SW48A Sweep 'N' Clean is a debris collector specifically designed for synthetic surfaces. The unit is towed behind any suitable power unit, having an independent engine drive to power the brushes. Material is sieved through a vibrating screen, with infill returning to the surface and debris collected in a hopper at the rear. This can be emptied manually when full. Debris collection is an essential maintenance operation on synthetic fields. Debris left on the surface can be dangerous to players, and will contaminate the infill if left to break down.

Specification

Effective working width	120cm (48")
Overall width	140cm (56")
Overall length excl drawbar	180cm (71"). With drawbar 270cm (100")
Weight	295kg
No. of brushes	8 brush strips
Hopper Capacity	0.08m ³ (0.11 yds ³)
Screen size	5mm (¼")
Engine	5.5hp Honda Petrol
Power requirement	12v electric supply
