Triplex Greensbrush

The Triplex Greensbrush is designed to mount directly to the front of most ride-on greens mowers to utilise the power and function of the mower to operate it. Regular brushing promotes a vertical sward which in turn improves the quality of cut and therefore ball roll. Regular brushing can also reduce the frequency of verticutting and will therefore reduce maintenance costs. The full width Triplex Greensbrush mounts in front of the cutting cylinders and can be locked up to allow normal use of the mower.

Specification

Working width	1.5m
Weight (approx)	40 - 60 kg (depending on fitting kit)
Available for	Toro 3250, 3100, 3150, 3400 Triflex John Deere 2500 A / B / E Jacobsen GK IV+, G / Plex 522 Eclipse
