Prevent expensive grass seed waste: Vredo makes every seed count!

Graph: Germination & distribution percentages

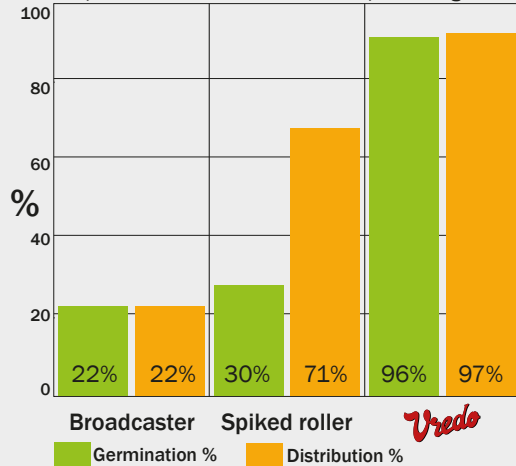

Table: Comparison of seed cost with actual germination figures

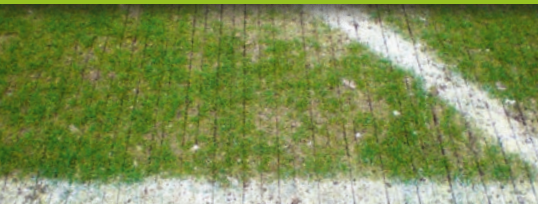

| Sowing method | Utilized grass seed | | | Wastage | | = |
|--------------------------|---------------------|-----------|--------------------|---------|---------|---|
| | Germination | 15 kg bag | Value ¹ | % | Value | |
| Control | 100 % | 15 kg | £ 65.00 | 0 % | £ 0,00 | |
| <i>Vredo</i> double disc | 96 % | 14,4 kg | £ 64.20 | 4 % | £ 2,60 | ✓ |
| Spiked roller | 30 % | 4,5 kg | £ 19.50 | 70 % | £ 45,50 | ✗ |
| Broadcaster | 22 % | 3,3 kg | £ 14,30 | 78 % | £ 50,70 | ✗ |

Example based on average UK prices: ¹ Lolium perenne - £65 per 15kg bag. Information based on tests by: Innoseeds DLF 2013, Barenbrug BV 2012. A Pöllinger. AU Triesdorf. Prosementis Deutschland.

The ownership of a **VREDO** Direct Overseeder, which is a true overseeding machine, is an investment that will pay itself back very quickly. By sowing the seed in the ground instead of merely broadcasting it on top of it, you make the best use of your costly grass seed. Your grass will then be lush and **green** in no time. Other "overseeders" are probably cheaper to buy, but much more expensive in everyday use and in the long-run - see the examples above. That's why you should ask for a **VREDO!**

VREDO - the true Overseeder, sowing seed in the ground, not on top!
