

Air2g2 – Hurlston Hall Golf Club, UK

The first picture was taken January 2013, 2nd picture January 2014. The green has been aerated every Wednesday for 40 weeks. Other than sarel rolling it's not had any other tradition aeration. It is now the firmest green we have and doesn't puddle anymore.

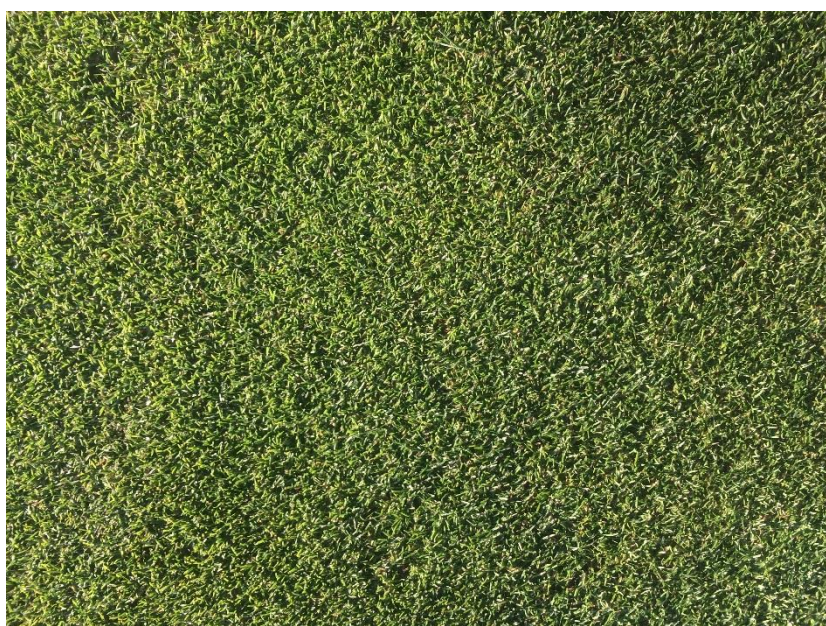

The 3rd, 4th, 5th and 6th pictures are of a green that has been done 13 times, as have all the greens and was taken on Tuesday 6th January 2015.

Every single green looks like this even the ones that are at field capacity. The plant health and population are better than summer. Yes I use a lot of products from Growing Solutions but I believe that the Air2g2 complements them.

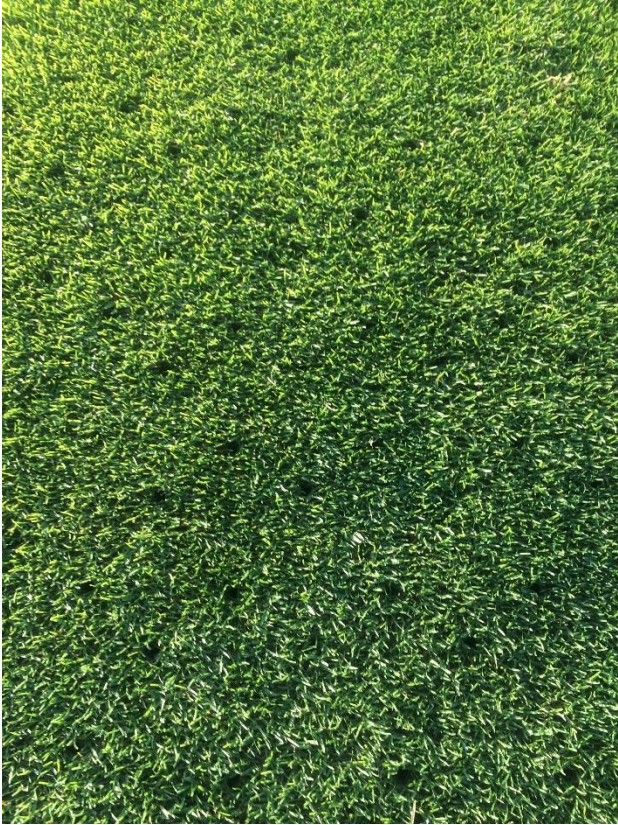

I took some core samples today (6th January 2015) and our thatch at 20-60 mm has all but dissolved. Yes we still have thatch in the top 20mm but who doesn't at this time of year.
