

## Debris Clearance Enhanced with the New Imants RotoBlast

Campey Turf Care Systems continue to make clearing debris a breeze with the new Imants RotoBlast.

The latest innovation from Imants joins a highly successful portfolio of exclusive products including the Koro FIELD TOPMAKER, ShockWave, SandCat and RotoKnife. The RotoBlast adds to this impressive line of machines with a 3,750-rpm blower that produces an air velocity of 130m<sup>3</sup>/min.

The tractor mounted blower is typically used for clearing greens and tees, fairways, pathways and other sports turf areas, but it is also designed to move leaves, grass clippings, thatch, litter and other unwanted surface debris from any area that requires clear access or to be kept tidy.

As with all Imants machines, the RotoBlast has been designed with the practical user experience at the forefront. Attached by a 3-point linkage, the powerful blower is mounted on a wheeled chassis to enhance its ability to follow contours on undulating terrain whilst maintaining a constant nozzle height above the ground. There is also an option to invert the wheels and revert to a fully mounted operation.

The lightweight machine only weighs 100kg and can be lifted and moved by one person when not mounted on the tractor. It has a capacity of 300m<sup>2</sup>/min with an operating speed of 0.6 -6.2mph, requiring only 25 -50 hp tractor power.
