

Campey Appointed Worldwide Distributor for Martin Lishman Micro-Spray

Leading groundcare machinery specialist Campey Turf Care Systems has been appointed as the Martin Lishman Micro-Spray worldwide distributor.

The Macclesfield based company has built a strong reputation in the turf care industry for their innovative product range that covers the entire spectrum of maintenance tasks. The new Micro-Spray from Martin Lishman sits well within the Campey ethos of providing customers with high-quality machinery that enhances established practices.

Martin Lishman National Sales Manager, Joel Capper, is confident Campey will increase the profile of the Micro-Spray and take it into new markets and is excited to continue working with the company.

“We have been working closely with Campey for a number of years and have been impressed by their global reach to sports clubs and amenity facilities,” Joel begins. “We feel confident in their ability to take the Micro-Spray forward into different markets in new countries and look forward to working with them even closer in this latest chapter in the Micro-Spray success story.”

Campey Chairman, Richard Campey, added: “New approaches and innovation is something we look for in the machinery we work with, and we’ve been impressed with Martin Lishman’s approach to compact sprayers for some time. We are very pleased to be able to reinforce an already successful relationship with this exclusive agreement regarding the Micro-Spray and look forward to the next developments in their range.”

The key aim of the Micro-Spray is bringing versatility to the groundsman’s armoury. A narrow footprint allows it to fit through most gateways and passageways to tackle hard to reach spraying areas.

With a 120-litre tank, the option of a 2.5m six nozzle or 3.5m eight nozzle three-section folding boom and the perfect combination of power, control and responsive handling, the Micro-Spray is suited to all types of sports grounds, golf courses and landscaping work. The comprehensive yet easy to use control box gives the operator more control over the sprayer with changeable motor direction to either walk behind or in front of the sprayer, 12 motor speeds, bout marker selection, a battery level indicator and optional hand lance.

Spray application rates, operating speed, and the pump pressure can be accurately and quickly controlled by the operator, as well as the adjustable boom height and independent shut-off nozzle bodies. All of these features come together to make a versatile sprayer that provides the same exceptional results time and time again regardless of where you’re working.
