

Campey to Attend GIS 2019 with Dakota and Air2G2

Campey Turf Care Systems will be attending the Golf Industry Show (GIS) 2019 in San Diego with Dakota and Air 2G2 GT Air Inject.

The GIS is one of golf's premier learning and networking events and representatives from Campey, Richard Campey, Ben Taylor and Dave Harrison, will be joining colleagues from Air 2G2, booth 3817-3816, and Dakota, booth 3552, to provide expert insight into the machines and their use on Europe's most prestigious golf courses.

Campey sells the Air2G2 Air Inject GT around the globe and since introducing it into the United Kingdom and Europe, it has become incredibly popular and is now in operation at a majority of leading golf venues.

It has long been a saying of Air 2G2 that 'air is everything to anything that lives,' and the machine provides that air in the least disruptive way possible. The ability to aerate greens when needed and

not just when conditions allow is one of the top reasons it has been so successful, and why its popularity continues to grow.

The three Campey representatives will also be at the Dakota booth. The companies range of Turf Tenders have led the way in spreading for some time now with Dakota routinely fine-tuning their spreaders to make them even more accurate.

The company has also listened to the needs of the golf industry and introduced the pedestrian 310 SP model alongside the 410 towed model. This pair of spreaders can be used to reach difficult to access areas of the course and put the turf under a fraction of the weight stress. The Dakota range of spreaders are sold within the Campey International trading areas and have become a mainstay in the UK and European professional sports turf markets while being recognised as the top option for top dressing.

For any advice or information speak to a member of the Campey team at Air2G2 booth 3817-3816 or Dakota booth 3552.
